## ALIGNMENTS

Rat myosin phosphatase targeting subunit 1-kinase, MYPT1 kinase, cDNA.

28-NOV-2002 ABS54622;

(first entry)

ABS54622 standard; cDNA; 1093 BP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to myosin phosphatase targeting subunit 1-kinase, MYPTI kinase (a subunit of the myosin light chain phosphatase SMPP-IM) or a portion of at least 5 consecutive amino acids. Also included are the nucleic acid encoding MYPTI kinase, a MYPTI kinase expression vector, a transformed host cell, an anti-MYPTI kinase antibody, screening a test compound for anti-hypertensive activity and a kit for detecting the MYPT kinase comprising a compound that specifically binds to MYPT kinase disposed within a container means. MYPTI kinase is useful for identifying compounds that inhibit hypertensive activity or which treat smooth muscle disease. The present sequence encodes a MYPTI-kinase from rat aorta smooth muscle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 200

The method comprises preparing a gene expression profile CC of a tissue or cell sample exposed to the compound, and comparing the CC gene expression profile to a database comprising SEQ ID 1-4925, where CC differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of a compound, predicting hepatotoxicity or the progression of a toxic effect. CC of a compound, identifying an agent that modulates the onset or CC progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at C least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in C liver rissues or cells for drug screening and toxicity markers in Sequence data for this patent did not form part of the printed confidential compositions. Note: The sequence data for this patent did not format directly from WIPO are the confidential expression, are useful in electronic format directly from WIPO are the confidential expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 493;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                             The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The
                                                                                                                                                                                                                                                                                          New oligonuclectide libraries comprising oligonuclectides which selectively hybridize to mRNAs transcribed from a transcription unit of genome, useful for detecting tissue-, pathology-, and developmental-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-JUL-2000;

                                       The invention provides human and murine recombinant Zipper Interpretein Kinase (ZIP-kinase) proteins. These proteins are sering kinases which bind the leucine zipper domain of transcription of ATF4. Host cells containing vectors comprising the ZIP-kinase acids are used for the recombinant expression of the proteins. protein and DNA are useful as gene therapeutic agents against o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and pathology-specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  quantitatively characterising the corresponding transcriptome, and detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised minilibraries to detect transcripts of a sub-transcriptome under a par biological or pathological state, and so allowing the detection of
                                                                                                                                                                           New

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                         ABLOOOIO to ABLOIIO4 represent human nucleic acid oligonucleotides comprising one or more single nucleotide polymorphisms (SNPs). ABB56531 to ABB56903 represent human peptides encoded by some of the SNP coligonucleotides. The sequences from the present invention can have immunosuppressive, cytostatic, antiinflammatory, neuroprotective and antimicrobial activities. Nucleic acids, polypeptides, oligonucleotides and antibodies from the present invention can be used for treating a subject suffering from, at risk for, or suspected of, suffering from a pathology ascribed to the presence of a sequence polymorphism. The pathology may be autoimmune diseases, inflammation, cancer, diseases of the nervous system, and infection by pathogenic microorganisms. The sure also useful for determining which forms of a characterised colymorphism are present in individuals. The antibodies may be used in the detection, quantitation and/or cellular or tissue localisation of a polymorphic protein (e.g., for use in measuring levels of the polymorphic protein within appropriate physiological samples)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of oddy the cDNA. The full libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in homology searches to identify the clone. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from
                                                                                AAK91856;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 757
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; full length cDNA; cDNA synthesis; oligo-capping;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the cligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                     Human;
                                                                                                                                                                                                                                                                                                     Human
                                                                                                                                                                                                                                                                                                                                                        06-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                        AAK94258;
                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAK94258 standard; cDNA;

Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of tull length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                      CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes human DAPK3. The expression level of the gene is used in the method of the invention. The specification descria a method of examining chronic myelogenous leukemia. The method comprine measuring the expression level of a gene selected from IFIT-2, LAGE-1 BAGE, DDB1, ETS2. PIASY, PIASX-alpha, PIASX-beta and DAPK3, or determining the expression profile of a group of genes including one more of these genes, in a cell or tissue sample from a chronic myelogenous leukemia patient. The method is used for the diagnosis, treatment and prevention of chronic myelogenous leukemia
           The invention provides human and murine recombinant Zipper Interacting Protein Kinase (ZIP-kinase) proteins. These proteins are serine/threonine kinases which bind the leucine zipper domain of transcription factor ATF4. Host cells containing vectors comprising the ZIP-kinase nucleic acids are used for the recombinant expression of the proteins. ZIP-kinase protein and DNA are useful as gene therapeutic agents against cancer, and as anti-cancer agents. The present sequence represents a DNA encoding a

                                 comprising one or more conservative substitutions in the amino acid sequence of (I). The polypeptide is useful for preparing a composition for treating or preventing e.g. cancer. This sequence encodes a death associated protein kinase 3 (DAPK3) interacting protein associated with the identification of novel human proteins and their functions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-JUL-2003

                                                                      sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and sequences; and sequences; AAB92446 to AAH13632 represent human amino acid sequences; and AAH13639 to AAH13632 represent human amino acid sequences; and AAH13639 to AAH13632 represent human amino acid sequences; and AAH13630 to Particularly of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; primer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             26-JUN-2001

                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for diagnosing a cancer in a subject. The method comprises determining, in a sample from the subject, the level of at least one polypeptide, where a higher level of the cancer is indicative of cancer. The polypeptide in a subject free of the polypeptide compared to the level of the polypeptide in a subject free of cancer is indicative of cancer. The polypeptide is selected from any of the polypeptides. The method of the polypeptides listed in the specification and polypeptides which are at least 70% homologous to the polypeptides. The method of the invention has cytostatic activity, and can year a use in gene therapy. The method is useful in identifying markers specific for one or several types of cancer, depending on the capplications as well as cancer type-specific targets for therapeutic contervention. The compounds that modulate the activity of a tumour content of the present sequence represents a polynucleotide of the invention.
                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAXS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) cannot acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to provent. (I) cancers and cancer metastases of haematopoietic-derived cells. AAK64703 coancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK84950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of a compound, predicting hepatotoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mendrick D,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polynucleotide comprising any one of CC 38043 cDNA sequences, appearing as ACHL2789-ACH50831, whose sequence was CC determined by the technique of SHH (sequencing by hybridisation). Also CC included is a purified polypeptide comprising a sequence corresponding to CC a reading frame of the novel polynucleotide. The nucleic acid sequences CC are useful in diagnostics as expressed sequence tags (EST) for CC identifying expressed genes or for physical mapping of the human genome, CC in forensics, in assessing biodiversities, or in identifying mutations CC responsible for genetic disorders and other traits. The nucleotide CC sequences are also useful as hybridisation probes, as oligomers for PCR, Cf for chromosome and gene mapping, in the recombinant production of CC protein, or in generating antisense DNA or RNA. The purified polypeptide CC is useful for generating antisense DNA or RNA. The present sequence CC is useful for generating antisense DNA or RNA. The present sequence CC is useful the 3013 isolated cDNA/EST sequences. Note: The sequence data CC cobained in electronic format directly from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABZ77126 to ABZ77165 encode the human protein kinases given in ABP96048 to ABP96087. The protein kinases have antiasthmatic, antiinflammatory, antidiabetic, antiparkinsonian, antimigraine, cardiant, cytostatic, immunosuppressive and vulnerary activities, and can be used in gene therapy. A protein kinase therapeutic agent from the present invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New protein kinase genes and polypeptides, useful for diagnosing diseases associated with a protein kinase, or in gene therapy for treating e.g. Parkinson's disease, migraine, myocardial infarction, allograft rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     26-JUN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a nucleic acid comprising a polymorphic region of a Calcium/Calmodulin-dependent protein kinase-like gene (CADPKL) allelic variant, and the polypeptide it encodes. CADPKL allelic variants are useful in determining whether a subject has or is at risk of developing a neuropsychiatric disorder, such as schizophrenia, attention of deficit disorder (ADD), schizoaffective disorder, bipolar disorder, unipolar affective disorder and adolescent conduct disorder. The polypeptides, polynucleotides, antibodies and modulators of the CADPKL allelic variants are useful for diagnosing or treating these neuropsychiatric disorders. The polypeptides may be used to raise antibodies to a CADPKL polypeptide. The nucleic acids may be used as probes or primers, in pharmacogenomics for designing therapies for the conditions of the same species (e.g. paternity testing). This sequence represents with the same species (e.g. paternity testing). This sequence represents

                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel method of predicting at least one toxic CC effect of a compound. The method comprises a gene expression profile of a Ct issue or cell sample exposed to the compound, and comparing the gene CC expression profile to a database compound, and comparing the gene CC information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the cCC predicting at least one toxic effect of a compound, predicting the renal CC consists of a toxic effect of a compound, predicting the renal CC cells exposed to known renal toxin. The genes are useful as toxicity CC cells exposed to known renal toxin. The genes are useful as toxicity CC cells exposed to known renal toxin. The specific disease or CC physiological states, or disease progression. This polynucleotide CC represents a rat DNA sequence relating to the toxic effect database CC described in the specification. NOTE: The sequence data for this patient CC did not form part of the printed specification, but was obtained in CC electronic format directly from the World Intellectual Property
                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                          RESULT 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC The invention relates to a nucleic acid comprising a polymorphic region CC of a Calcium/Calmodulin-dependent protein kinase-like gene (CADPKL) CC allelic variant, and the polypeptide it encodes. CADPKL allelic variants CC are useful in determining whether a subject has or is at risk of CC developing a neuropsychiatric disorder, such as schizophrenia, attention CC deficit disorder (ADD), schizoaffective disorder, bipolar disorder. CC unipolar affective disorder and adolescent conduct disorder. The CC polypeptides, polynucleotides, antibodies and modulators of the CADPKL CC allelic variants are useful for diagnosting or treating these neuropsychiatric disorders. The polypeptides may be used to raise CC antibodies to a CADPKL polypeptide. The nucleic acids may be used as CC probes or primers, in pharmacogenomics for designing therapies for the CC disorders, and in fingerprinting for detection of different individuals with the same species (e.g. paternity testing). This sequence represents CC numan CADPKL cDNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                          immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activitys such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and constructions. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous figuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the religious control of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a polynucleotide comprising a sequence given in the specification, or its mature protein-coding portion, or its complement. The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030104529.
                                                                                                                                                                                                                                                 CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                         09-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Zhou

 The invention relates to a method for screening biologically active agent that modulates cancer associated protein kinase function. The invention CC also relates to a method for diagnosing cancer comprising determining the current converted to the convertion of expression of a nucleic acid sequence encoding a protein CC winase. The method is useful for diagnosing cancer. A protein kinase is cuseful for screening biological agents that modulate cancer associated CC protein kinase function. Downregulating the activity of protein kinase is cuseful for inhibiting the growth of a cancer cell, e.g. liver or colon CC cancer. A nucleic acid encoding protein kinase is useful to screen biopsy CC derived tumours and inflammatory samples such as arthritic synovium, for amplified DNA in the cell or increased expression of corresponding mRNA CC or protein and is also useful to detect differences in expression levels CC such as molecular weight, amino acid and nucleocide sequences between the CC located on chromosome 1q32.1-32.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 28

Polynucleotides encoding diagnostic and therapeutic proteins, e.g. enzymes, hormones and receptors, useful in diagnostics and therapeutics.

Claim 1; Page 310-311; 522pp; English.

cx The invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, and CC proteins involved in growth and development and receptors. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate DITHP expression. For example, (I) and (II) may be used to treat disorders associated with decreased polypeptide cc expression by rectifying mutations or deletions in a patient's genome, CC that affect the activity of the DITHPs, by expressing inactive proteins or supplementing the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder. (CC leukaemia, autoimmune disorders, and respiratory disorders. Additionally, CC (I) may be used to produce the DITHPs, by inserting the nucleic acids in complementary sequences may also be used as DNA probes in diagnostic cassays to detect and quantitate the presence of similar nucleic acids in cassays to detect and quantitate the presence of similar nucleic acids in cassays to detect and quantitate the presence of similar nucleic acids in cassays to detect and and activity. The anti-DITHP antibodies and ancagonists may case describedies may also be used as antigens in the production of cassays to down regulate expression and activity. The anti-DITHP antibodies and ancagonists may case of presence of DITHPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAS30986-AAS31196 represent human diagnostic and therapeutic complements and samples of the invention

                                                             Ś
                                                                                                                                                                                                                                                                                                                           The invention relates to a nucleic acid comprising a polymorphic region of a Calcium/Calmodulin-dependent protein kinase-like gene (CADPKL) allelic variant, and the polypeptide it encodes. CADPKL allelic variants are useful in determining whether a subject has or is at risk of developing a neuropsychiatric disorder, such as schizophrenia, attention deficit disorder (ADD), schizoaffective disorder, bipolar disorder, unipolar affective disorder and adolescent conduct disorder. The polypeptides, polynucleotides, antibodies and modulators of the CADPKL allelic variants are useful for diagnosting or treating these neuropsychiatric disorders. The polypeptides may be used to raise antibodies to a CADPKL polypeptide. The nucleic acids may be used as probes or primers, in pharmacogenomics for designing therapies for the disorders, and in fingerprinting for detection of different individuals with the same species (e.g. paternity testing). This sequence represents human CADPKL genomic DNA of the invention

CC polymoreotides (cdps) from the corn (Zea mays) cDNA libraries SATMON022
CC and regulatory genes of corn ear. The polymorelectides sequences are cc useful for detecting cpds in a sample, for producing a corn ear-specific profile of gene transcription, for detecting altered gene expression in continued or hybrid plants, and for screening several molecules for specific binding to the polymorelectide. The cdps are useful to identify, isolate, or extend identical or related corn-ear mucleic acid sequences from DNA cc libraries, and in mucleic acid amplification or hybridisation techniques to follow the expression of desirable traits through plant breeding corpograms. Preferably, the cdps are useful to identify, evaluate, or cf follow the inheritance of desired characteristics associated with growth can development, disease resistance, environmental adaptability, quality, and yield of corn. The cdps are also useful as molecular markers for studying inheritance and multigene traits in a plant breeding program. The cpds are useful for producing purified corn-ear polypeptides by crecombinant techniques. They are also useful in diagnostic assays to of cdp expression. ABX81541-ABX89140 represent corn car-derived corpositions conditions or diseases associated with abnormal levels of cdp expression. ABX81541-ABX89140 represent corn car-derived corn part of the printed specification, but was obtained corn electronic format directly from the USPTO web site at seqdata.uspto.gov/psipsDIDEntry.html

                                                                                                                                                                                                                                     The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to single exon nucleic acid probes The probes are useful for predicting a microarray for predicting, measuring and displaying expression in samples derived from human placenta. The probes are for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene

They can be used to measure gene expersion in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the
                                                                             The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be
involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which associated with coronary heart disease. ABS25011-ABS51005 represent hun liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                      Penn
                                                                                                                                                                                                                                  Human

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung; comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; ds; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; cuberous sclerosis; Gaucher's disease; Niemann-Pick disease; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; pulmonary histocytosis; lymphangioleiomyomtomary haemosiderosis; pulmonary histocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 447 BP; 95 A; 140 C; 74 G; 138 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                 WPI; 2002-114183/15

the eukaryote; and (b) detecting specific hybridisation of detectably comparison of a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several ctissues and/or cell types using hybridisation to a single gene capression of the exons single sene; a period to the exons should be assigned to a single exon comprising one compression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single eyen; a period comprising one of 12011 sequences, mentioned in the specification, or encoded by the probee/open reading frames (ORF). The probes are used for gene expression compression and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (CODP), interstitial lung cancer, chronic obstructive pulmonary fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-puldisk syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary critary compared to a single exon probe of the primary ciliary dyskinesis, pulmonary haemosiderosis, pulmonary ciliary compared data for this patent did not form part of the printed case expression and hyaline membrane disease. The specification, but was obtained in electronic format directly from WIPO as formators.

The nucleic acid sequences CC are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, CC informatics, in assessing biodiversities, or in identifying mutations CC responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, CC for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data contained in electronic form part of the printed specification, but was cobtained in electronic format directly from USPTO at sequence.html?Doc1D=200100774673

                                                                                                                                                                                                                                                                                                             The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
